

It Pays to Be a KAP Member!

PAT Inc.

[PAT Inc.](#), KAP's preferred supplier of GPS technology, recently won three awards from Trimble while competing with companies from over 20 countries. These included *The Global EZ-Guide + and EZ-Steer Sales & Marketing Award*, and *The Platinum Circle Award for Unparalleled Sales and Customer Service*. In addition, PAT Inc. President David Giannotti was presented with an *AgGPS 132 Lifetime Award*.

For 2007, PAT Inc. and Trimble just introduced EZ-Guide 500, a new lightbar Guidance System with a large 7" LCD color display, data logging functions, and variable accuracy options. This new EZ-Guide 500 is a high-performance version of Trimble's popular AgGPS® EZ-Guide® Plus lightbar guidance system. It provides GPS-based guidance to steer tractors, sprayers, fertilizer applicators, air seeders and large tillage tools that require consistent accuracy to help save fuel, time and input costs.

The system allows operators to easily see on the large screen, in color and real-time, the area they have covered in the field. This new technology with the data logging function allows users to record the day's work and transfer it to a PC via a USB flash drive for creating printed maps and reports.

In addition, the new EZ-Guide 500 offers users a variety of accuracy options—without purchasing a costly external GPS receiver. You can choose: 6-8 inch pass-to-pass accuracy, or 3-5 inch accuracy with OmniSTAR XP/HP subscription service; or even 1-inch year-to-year repeatability using RTK corrections.

The EZ-Guide 500 is a very unique system, having “good-better-best” options built in. Most other lightbar products don't have the ability to be upgraded to higher accuracies without adding an expensive GPS receiver.

For members interested in this new GPS technology, please call Ian or Roy at PAT Inc at 1-866-531-2887. To receive KAP's preferred pricing, be sure to tell them that you are a KAP member.
